

Workshop AWS WebApp
Deployment

Voor Hogeschool Windesheim

21 maart 2024

Wie zijn wij?

Arjen Wassink

- Quintor
- Architect

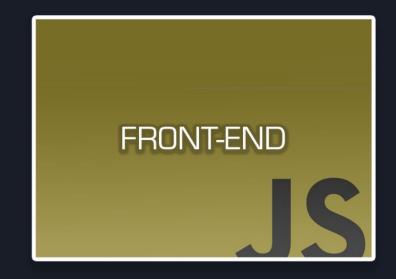

- E-mail: awassink@quintor.nl
- X: @ArjenWassink
- LinkedIN: arjen-wassink-39204423

Specialisaties

- Container Technologie
- Cloud Technologie
- Java Developer

QUINTOR.NL/STUDENT

Agenda

- Traditionele Webhosting
- S3 Website Hosting
- CORS
- CloudFront
- Hands-on

AWS Cloud Region eu-central-1 Availability Zone 2 Internet Browser Load Balancer Web Server Backend Server Database Server

AWS Cloud Region eu-central-1 Availability Zone 1 HTTPS Load Balancer Database Server Web Server Backend Server Availability Zone 2 ... Internet Browser **Backend Server** atabase Server Load Balancer Web Server Availability Zone 3 HTTPS Load Balancer Web Server Backend Server Database Server

S3 – Cloud Object Storage

- Digitale opslag ontworpen voor webscale computing
- 99,9% beschikbaarheid
- Bewaart data redundant (11 nines)
- Opslag \$0.023 per GB
- \$0.0004 per 1000 requests
- Download \$0.09 per GB

S3 – Website Hosting

- Optionele feature
- Only HTTP, No HTTPS!
- index document & custom error document
- Bucket policy configuration for read access

http://<bucket-name>.s3-website-<region>.amazonaws.com

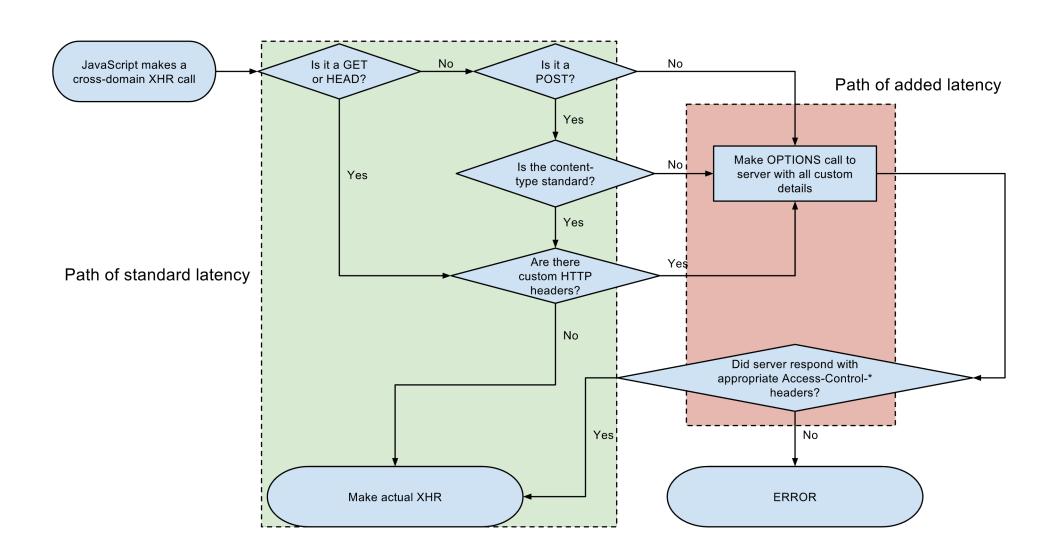

AWS Cloud Region eu-central-1 Availability Zone 1 Website Hosting Load Balancer Backend Server Database Server HTTP HTTPS Availability Zone 2 ... -HTTPS-Internet Browser **Backend Server** Load Balancer Database Server HTTPS Availability Zone Database Server Load Balancer Backend Server

Same-Origin Policy (SOP) Quintor

Vergeleken met https://blog.example.com/posts/foo.html

URL	Same Origin	Reden
https://blog.example.com/posts/bar.html	Ja	Alleen het pad verschilt
http://blog.example.com/posts/bar.html	Nee	Ander protocol
https://blog.example.com:8080/posts/bar.html	Nee	Andere poort (https:// is standaard poort 443)
https://example.com/posts/bar.html	Nee	Andere host

Cross-Origin Resource Sharing Quintor

CloudFront

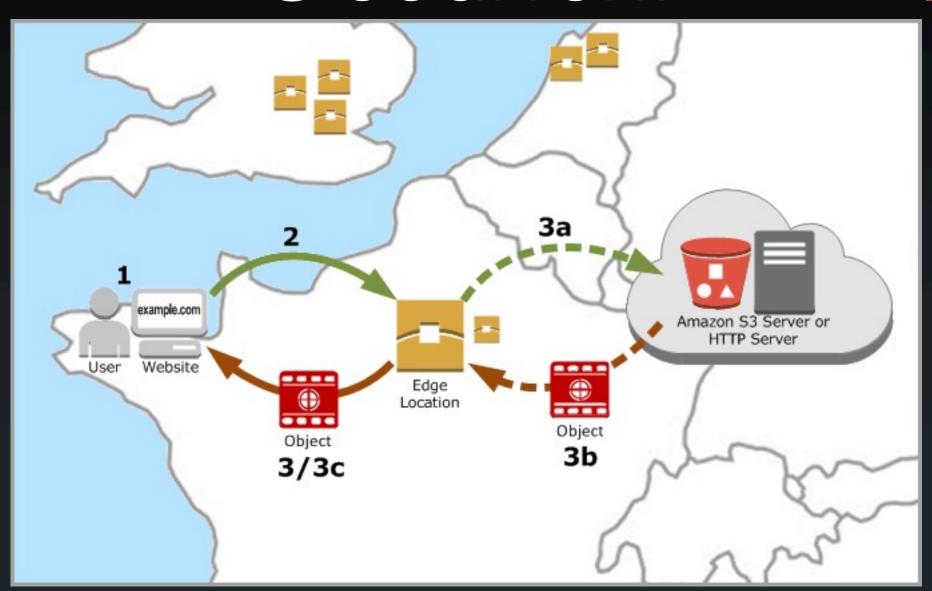

- Cloudfront is een service voor het versnellen van verspreiding van content naar gebruikers
 - Zoals HTML/CSS/JS, Afbeeldingen, Video, etc
- Cloudfront gebruikt AWS Edge locaties als cache voor de content
 - Het verplaatst de content dichter bij de gebruiker
- In essentie het beste te vergelijken met een CDN

CloudFront

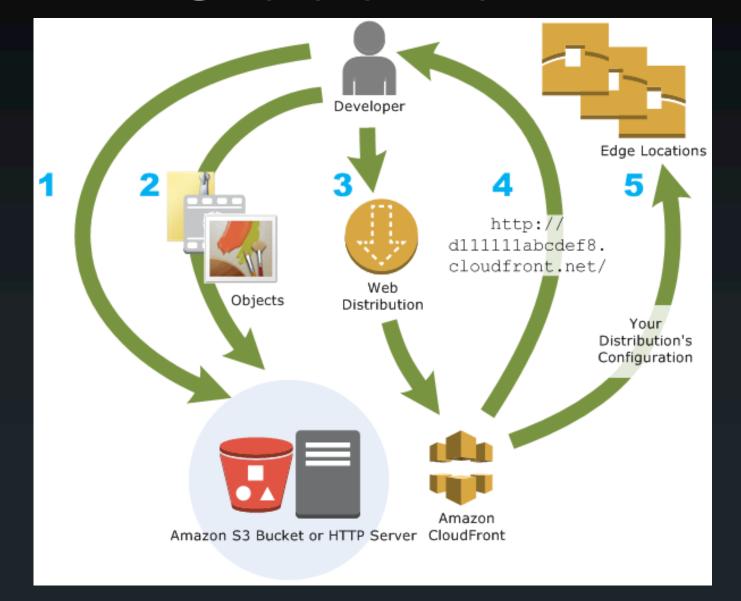

- Reverse Proxy mogelijkheden
 - \$3 buckets
 - HTTP Endpoints
- Ondersteund HTTPS en DNS
- Download \$0.085 per GB
